

The Art of Suspension

Individual cable systems and suspension solutions for lighting fixtures, interior construction, signs, galleries, exhibitons, construction sites, rigging, stage production and fair booths.

REUTLINGER[®]
systematic suspension

Solutions for designers since 1864

From rope-maker to high-tech company

More than 140 years ago Wilhelm Benjamin Reutlinger I. – scion of an old roper family – already began with the industrial production and processing of hemp- and wire-rope in Frankfurt.

In 1987 Wolf Reutlinger took over management of the tradition-bound company and introduced it to new applications such as cable suspension and innovative clamping systems.

More than meets the eye – the essential parts remain hidden

REUTLINGER holders always make firmly fixed connections. This is accomplished by our unique interior clamping mechanism: the higher the load, the greater the clamping force applied to the cables. REUTLINGER holders are available in a wide variety of versions and sizes – from the smallest holder of just a few millimetres to heavy-duty versions that reach more than three tons breaking load.

We offer suitable cables with diameters between 0.45 mm up to 8.0 mm.

REUTLINGER continuously expands its product range and thereby has already established itself as a leading supplier of the international lighting industry.

Among our clients are not only most leading producers of lighting systems, but also the automobile industry, shop equipment and retail specialists, as well as galleries, museums, fair booth designers and event technology distributors.

Your requirements – our challenge

REUTLINGER offers individual solutions – together with our clients we develop and produce made-to-order products for all applications.

Just ask us – we look forward to the challenge.

Quality and safety

We are proud of our quality: it's a result of innovative engineering, modern planning, production facilities and conscientious testing. We can therefore guarantee the consistently high quality of our products.

REUTLINGER has passed the rigid demands of the German TÜV with all product lines. All of our proprietary holders carry the GS-seal, the highest and most comprehensive certification for product safety.

Some product ranges are certified for applications where conformity with BGV C1 regulations is required.

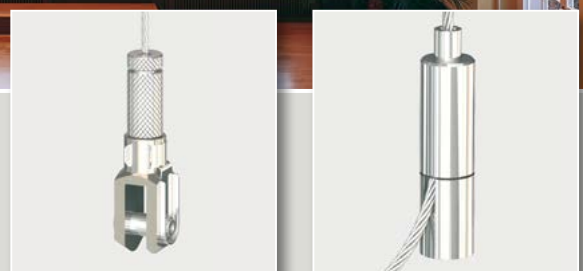

Mini|Standard [Type 10|12|15|18|20]

Inconspicuous suspensions for lighting fixtures and interior construction.

Heavy Duty [Type 25|30|50|66 |80]

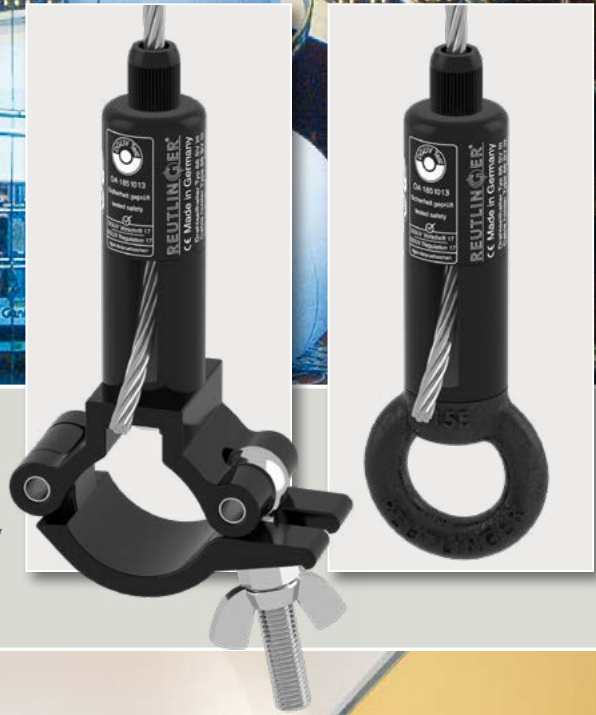

Flexible and secure suspension of heavier lighting fixtures, architectural ceilings, monitors and other installations.

Event Technology

Fast and flexible rigging solutions for stage productions, fair booths and other events.

Gallery

Vertical and horizontal positioning of exhibits on the wall – easy and flexible.

Shop | Display

Individual suspension solutions for signs, sales presentation and shelving in shops & galleries.

Retail

Quick and easy installation of signs and displays suspended from the ceiling.
